

Press release

June 6, 2018

3D-SIDE announces a €3M capital increase to commercialize its web-based Software as a Service platform (SaaS) permitting the mass customization of medical devices.

3D-Side is pleased to announce the launch of **Customize**, its web-based **Software as a Service solution** (SaaS) for the mass customization of medical devices. This innovative platform connects doctors, patients & medical companies permitting to interact, create and supervise the production of patient-specific medical devices under ISO13485. It includes:

- A communication tool to interact easily and quickly with the medical team
- A design program to create custom made medical devices
- A production management interface to supervise just in time deliveries, inventories, ...

With the aim of a **better customer experience**, a **shorter lead time** and a **certified quality**.

The personalization of implants is the future of orthopaedics. The shift from batch to patient-specific must be anticipated since it represents a large gap. The industry must adapt to new ways of working by using a new generation of tools. The SaaS “*Customize*” demonstrates 3D-Side’s market leadership in this regard, making processes much more efficient.

The €3M capital increase funds a global reinforcement of 3D-Side to reach international markets and make Customize a reference platform.
